

Three steps to cloud accounting advice and implementation support

There are so many cloud accounting solutions out there that it's hard to see the wood from the trees. Even when you do know which solution you want, getting it set up to align with your objectives and drive efficiencies can be time consuming.

Our specialist team advise in three main areas:

Does your current solution work and can we make it work harder for you?

We'll undertake an honest appraisal of whether your existing system, and processes, work well enough for your current and future needs.

We'll share some quick practical ideas to get more out of your existing software, and give recommendations for improvements or add-ons to enhance its capabilities.

If you do opt to implement a new solution, we'll ensure you hit the ground running

If you decide to change your software or apply add-ons, we'll get it in, tested and customised for you. Our experts share best practice from hundreds of organisations to make your implementation a success: they know which areas will benefit from more thorough testing and they'll get you set up with a best of breed, customised cloud accounting solution.

We'll be on call for training and ongoing support

We'll train your team on the software and updates, with tips, short cuts and training documentation to ensure you get the most out of the solution going forward. Our team will also be on hand should you have any ad-hoc queries going forward.

Solution-agnostic, best of breed approach

We are solution-agnostic. While we're happy to share reduced corporate rates we certainly don't get commission from software sales. Our objective is to ensure you have the best accounting solution for your needs and that you get the most out of your investment in these tools.
